# Week 2 Submission

Working UI Prototype — 5 Interactive Screens with Full Navigation

Flutter · Material Design 3 · Cross-Platform

GitHub: [github.com/kutikantiyashwanth/LearnHub](https://github.com/kutikantiyashwanth/LearnHub) · kutikantiyashwanth · 2026

## 1. Prototype Overview

LearnHub is a cross-platform Learning Management System built with Flutter (Dart). The Week 2 prototype delivers **5 fully interactive screens** with smooth animated navigation, form validation, real-time search, and interactive UI elements — all built on a consistent Material Design 3 theme using indigo and teal brand colors.

**GitHub Repository:** <https://github.com/kutikantiyashwanth/LearnHub> · Branch: main

| Screen         | Route   | Status    | Key Interactions                                                            |
|----------------|---------|-----------|-----------------------------------------------------------------------------|
| Login          | /login  | ✓<br>Done | Form validation, loading state, forgot password dialog, animated transition |
| Sign Up        | /signup | ✓<br>Done | 4-field form, password match, terms checkbox, success snackbar              |
| Home Dashboard | /home   | ✓<br>Done | Progress card, programs grid, achievements, notifications, profile sheet    |

|                 |                 |           |                                                        |
|-----------------|-----------------|-----------|--------------------------------------------------------|
| Program Listing | /programs       | ✓<br>Done | Live search, category filters, 8 programs, empty state |
| Program Detail  | /program-detail | ✓<br>Done | Curriculum, enrol button state, bookmark, share        |

## 2. Screen Designs & Wireframe Comparison

Each screen below shows the implemented Flutter UI alongside the original Week 1 wireframe concept.

- ✓ 4-field form with validation
- ✓ Password match check
- ✓ Terms & conditions checkbox
- ✓ Success → redirects to Home
- ✓ Back to Login navigation

③ HOME / DASHBOARD

④ PROGRAM LISTING

### 3. Design Choices & Branding

#### Color Palette

| Token        | Color      | Hex     | Usage                                    |
|--------------|------------|---------|------------------------------------------|
| Primary      | Indigo     | #4F46E5 | Buttons, active states, headings         |
| Accent       | Teal       | #14B8A6 | Success states, gradient end, checkmarks |
| Background   | Light Gray | #F7F8FC | App background                           |
| Surface      | White      | #FFFFFF | Cards, inputs                            |
| Text Primary | Dark Slate | #1E293B | Headings, body text                      |
| Star         | Amber      | #FBBF24 | Rating stars                             |

#### Typography & Spacing

- Font: Segoe UI / System default — clean and readable on all platforms
- Heading sizes: 28px (screen titles), 22px (greetings), 18px (section titles)
- Consistent spacing tokens: xs=4, sm=8, md=16, lg=24, xl=32, xxl=48
- Border radii: sm=10, md=14, lg=20, xl=28 — progressively rounded cards

#### Responsive Layout

- Mobile (<600px): Single column, bottom navigation bar
- Tablet (600–1023px): 2-column grid for program cards
- Desktop (> 1023px): Split layouts (brand panel + form on Login/Signup), sidebar-style detail

## 4. Interactive Features Implemented

| Feature                      | Screen         | Implementation                                                     |
|------------------------------|----------------|--------------------------------------------------------------------|
| Form validation              | Login, Sign Up | Flutter Form + TextFormField validators with error messages        |
| Loading state                | Login, Sign Up | CircularProgressIndicator replaces button text on submit           |
| Forgot password              | Login          | AlertDialog with email input and success snackbar                  |
| Password visibility toggle   | Login, Sign Up | obscureText toggled via setState                                   |
| Animated page transitions    | All screens    | FadeTransition (login→home) and SlideTransition (→programs/detail) |
| Live search                  | Program List   | onChanged filters _allPrograms list in real time                   |
| Category filter chips        | Program List   | AnimatedContainer chips update filtered list                       |
| Empty state                  | Program List   | Shown when filtered result is empty                                |
| Notifications sheet          | Home           | showModalBottomSheet with 3 notification tiles                     |
| Profile sheet + logout       | Home           | Avatar tap → bottom sheet → logout navigates to /login             |
| Bookmark toggle              | Program Detail | setState toggles icon + snackbar feedback                          |
| Enrol button state           | Program Detail | Button changes color and label after tap                           |
| Data passing between screens | All            | Navigator arguments pass program Map to detail screen              |
| Snackbar actions             | Program Detail | FloatingSnackBar with "Go Home" action button                      |

## 5. GitHub Repository & Commits

**Repository:** [github.com/kutikantiyashwanth/LearnHub](https://github.com/kutikantiyashwanth/LearnHub)

ea36266

**feat:** add Sign Up screen with full form validation and navigation

New signup\_screen.dart · updated main.dart routes · login navigates to /signup

6b025c8

**feat:** Week 2 — interactive UI prototype with full navigation

32a31e7

**docs: add Week 1 App Proposal PDF**

915KB PDF with wireframes, user journeys, tech stack

b4cac06

**docs: add Week 1 App Proposal and README**

Comprehensive README with navigation flow, folder structure, tech stack

f0c7eae

**Initial commit: LearnHub Flutter App**

Full Flutter project structure with 4 screens, theme, responsive utils

## 6. How to Run the App

| Platform        | Command                                      |
|-----------------|----------------------------------------------|
| Web (Chrome)    | <code>flutter run -d chrome --release</code> |
| Windows Desktop | <code>flutter run -d windows</code>          |
| Android         | <code>flutter run -d android</code>          |

**Prerequisites:** Flutter SDK 3.x installed and added to PATH

**Install dependencies:** `flutter pub get`

## 7. Week 2 Learning Outcomes Achieved

- ✓ Translated all 4 Week 1 wireframes into functional Flutter UI screens
- ✓ Implemented navigation between all screens using named routes with animated transitions
- ✓ Applied consistent branding — indigo/teal color scheme, Material Design 3 tokens
- ✓ Built structured, user-friendly mobile interfaces with proper responsive layouts
- ✓ Gained hands-on experience with Flutter widgets: Form, TextFormField, BottomSheet, SnackBar, AlertDialog, GridView, ListView, SliverAppBar
- ✓ Implemented real interactive patterns: live search, filter chips, progress indicators, state changes
- ✓ Maintained clean Git history with meaningful commit messages
- ✓ Delivered a working prototype running on Chrome web and Windows desktop
